## **DermaFrac Treatment**

### **An Innovative Skin Rejuvenation System**

DermaFrac is a micro-channeling treatment that combines precisely calibrated needle penetration with simultaneous delivery of infused ingredients in a pain-free, no down time treatment.

A precision controlled hand-piece containing the micro-needle roller tip cap and a cartridge of a specialized serum is moved across the skin. The vacuum gently pulls the skin into contact with hundreds of micro-needles that painlessly penetrate through the epidermis and into the upper dermis (papillary dermis). This procedure creates two beneficial effects. The first is the stimulation of the body's natural response to an injury; this increases collagen and fibroblast activity. Secondly, the channels created act as pathways for the delivery of the serums to the all important upper dermis.

This treatment is a must-try for the beauty-lover with an active and busy lifestyle. Unlike other methods of micro-channeling, the DermaFrac procedure requires no downtime. It is one of the top "lunchtime procedures" available and takes under 30 minutes for full facial application. At a cost much lower than other treatments, such as laser rejuvenation, the collagen-supercharging DermaFrac treatment is an affordable way to ***erase-the-signs-of-time*** without breaking the bank.

## **Targeted Treatments**

### **for Hydration with Hyaluronic Acid and Anti-Oxidants**

Accelerates skin turnover and stimulates new skin formation by increasing growth factors. Also have antioxidants that calm the skin.

### **for Lightening with Kojic Acid**

Penetrating active, acts upon melanin producing cells to suppress melanocyte activity & pigmentation process. Also have antibacterial and antifungal properties. Kojic Acid is a natural, effective lightening ingredient with no toxic issues.

### **for Anti-Aging with Peptides**

Super cocktail of 5 key Peptides, a combination of active ingredients that up regulate fibroblasts to create new collagen. Attenuates the release of neurotransmitters to relax muscles.

### **for Acne with Lactic and Salicylic Acid**

Continues to work hours after application to loosen the bonds between cells at the upper epidermis allowing the dead cells to be exfoliated more easily. Salicylic acid exfoliates outer layer of the skin, opens clogged pores and neutralizes bacteria. The Lactic Acid also exfoliates, increases collagen production resulting in diminished acne, and softens skin tone and texture.
