## Oxygen Therapy Facials

*Oxygen Facials combat the visible signs aging. As time goes on, oxygen levels in the skin decrease and cell turn-over is reduced. Oxygen Facials reverse this effect by replenishing lost oxygen and moisture into the skin through.*

Fitting for all types of skin, oxygen facials provide luminous hydration, a healthy glow, and visible age defying results. Using a natural amino peptide complex clinically proven to smooth the dermis and significantly diminish the appearance of fine lines and wrinkles, the Oxygen facial treatment is perfect for sun or environmentally stressed skin. Designed to refine the forehead, soften eye contours, the Oxygen facial smoothes and firms instantly! Oxygen treatments also speed up healing time and reduce sensitivity after other skin treatments.

An airbrush-like wand hovers just above your face. The Oxygen infusion system uses therapeutic grade oxygen under hyperbaric pressure to infuse a skin specific cocktail of hydrators, hyaluronic acid, essential vitamins, botanicals, antioxidants and amino peptides to the deeper layers of the skin. Hyperbaric simply means the therapeutic use of oxygen delivered at above normal pressure. It takes the atmospheric oxygen from the air that surrounds you in the room and concentrates into 95% oxygen. Oxygen is also a natural bactericide (destroys anaerobic bacteria) and helps to cool and calm the skin. The result is luminous, unparalleled hydration and visible, age defying results. Rehydrated, younger, plumped up skin in less than hour will set this treatment apart from any other facial treatment on your menu.

### WHAT TO EXPECT

There is no downtime or recovery time following this facial rejuvenation treatment. Your skin will feel moisturized and glow with improved firmness and radiance. Celebrities endorsing the facial include former Victoria's Secret Angel Miranda Kerr, Fergie and Madonna herself.

**Oxygen facials will smooth out your skin, increase cell turnover, restore moisture and assist in removing visible signs of aging!**
