Oxygen Scalp Therapy

Unlike other oxygen treatments, which atomize or spray oxygen on the scalp, the Topical Hyperbaric Oxygen System uses therapeutic oxygen under hyperbaric pressure to infuse a special serum of modified anti-hair loss serum, and may also add essential vitamins, botanicals, antioxidants, amino acids and peptides into the scalp. Rehydrated, plumped up scalp in less than an hour will set this treatment apart from any other hair treatment.

“Love Your Healthy Hair!!!!!!!!!!”

More and more men and women suffer from hair loss and / or hair thinning due to changes in lifestyle and nutritional imbalance. Others may find their hair to be too oily, dry or damaged from over processing or excessive styling. Each treatment is based on the fact that blood and oxygen are the great allies of hair health. Oxygen provides the fuel needed to build hair. A good local blood flow supplies to the roots all the nutrients and the raw elements needed to create the proteins that form hair.

What does Topical Hyperbaric Oxygen mean?

Hyperbaric simply means that therapeutic use of oxygen delivered at above normal pressure. It takes the atmospheric oxygen from the air that surrounds you in the room and concentrates into 95% pure oxygen.

Why is oxygen used topically?

Oxygen is a natural bactericide (destroys anaerobic bacteria) and helps cool and calm the skin. We use oxygen under pressure to enhance the skin's absorption of the Serum Infusions.

What does Infusion mean?

An Infusion refers to the process of applying hydrophilic (water loving) Anti-Hair loss serum technology to the skin. Based on research originating in Australia, they identified a new, modified form of the HL serum; this special type of HL serum has the same proven moisture binding benefits as traditional serums, but because of its lighter weight, it has the ability to target the scalp where it not only deeply hydrates but also helps stimulate collagen synthesis. Additionally, it draws or carries other active and beneficial scalp specific ingredients such as vitamins, antioxidants, botanicals and amino acids & peptides to the scalp.

How is oxygen used to treat the scalp?

Topical Hyperbaric Oxygen, when applied directly to the scalp is an innovative approach to healing difficult scalp issues. Topical hyperbaric oxygen (oxygen under pressure) directs oxygen to the vital fluids at the surface and is used to reduce bacteria and to speed healing.

Which scalp conditions benefit from Oxygen Infusion?

Infusions help increase the scalp's moisture levels and targets dry, dehydrated hair follicles; increase supply and flow of the blood increasing the nourishment which allows the hair to grow.
